usTLD Nexus Checks**

Evidence Accepted for usTLD Nexus Checks

In its responsibilities as the Administrator of the .US Top-Level Domain (usTLD), Neustar performs regular spot checks to verify that domain names in the usTLD comply with the usTLD Nexus Requirements.

Registrants whose .US domain names are selected for Nexus revalidation are required to provide a written response with supporting documentary evidence, demonstrating that they meet the usTLD Nexus Category identified in their domain name registration.

The following are examples of acceptable documentary evidence for each usTLD Nexus Category, as well as a description of the information that must be shown for each to demonstrate compliance with the usTLD Nexus Requirements. Neustar recommends that registrants redact identifier numbers from documentary evidence provided pursuant to a Nexus check.

Category 1 (i), United States Citizen – U.S. Passport, U.S. Birth Certificate

Documents must show the registrant's name.

Category 1 (ii or iii), United States Permanent Resident or Primary Place of Domicile – Green Card

Documents must establish permanent residency and show the registrant's name.

Category 2, United States Organization – valid deed, lease, tax ID, or other official document with the entity's United States address listed

Documents must show the registrant organization and its United States address and be current (i.e. from within the last two years).

Category 3, Foreign Entity with Bona Fide Presence – valid bill of sale with a United States buyer or, if the entity has a United States address, a valid deed, lease or other official document with the entity's United States address listed

A bill of sale must show the registrant organization and a buyer in the United States.

If the organization has a United States address, documents must show the registrant organization and its United States address and be current (i.e. from within the last two years).
